

Saturday 13th June 2026

1. Let me remove certain Aisles and add them.
2. Make a funny name as the title of the App
3. Make the app more visually appealing, more bold text, make it easy to look at for my Mum. Using nice colours and colour coding certain food items, she said currently it looks hard to look at and not nice looking.
4. Change App Icon
5. When typing the price of an item, the keyboard shown should be the numbers keyboard not a regular keyboard
6. For items like eggs, we would normally buy it in packs so let there be an option to buy in packs/bottles for some items etc
7. Make the app keep track of the day and time
8. 'This Week's Budget' & 'This Month's Total Budget' - Based on what was spent last week, and taking into account the total month's budget and how much is left, show what this week's budget is.
9. Show which family members are on the app. Make Mum the main user of the app, and me the secondary. If I add an item to a shopping list make sure my mum can see that I added it.
10. Add a button where it will start the shopping session, make sure to ask my mum to fill out certain details if not filled out before a shopping session
11. Add a quick shop feature, instead of just doing a weekly shopping. Make the app have both
12. Frequently bought items - when writing a new weekly shop, let my mum press an fill out Frequently bought items button and she can tick what she wants included or as she is adding items.
13. Try not to overload the screen's display at once, keep it simple without removing features.
14. As my mum ticks through items on the list, make sure they are crossed out and then get hidden to keep the display clear. But include an undo button
15. Add Animations
16. Make the quantity a bit smarter rather than just '1' or '2' for example
17. Real-Time Cross-Offs: If you are both in the store, seeing items get crossed off in real-time prevents buying double of anything.
18. "Can You Get This?" Button: A one-tap button for family members to send a photo and request a specific item directly to her app. - she can choose yes or no
19. Once completed all items, add an ending screen and say 'head to checkout!' Display the estimated checkout price. 'Estimated Total'
